

# ADVANCED MODE: LOADBALANCER

- ▶ Expensive (usually each LoadBalancer is billed separately, for existence & traffic)
- ▶ Certificate management is limited by the Cloud-Provider capabilities
- ▶ Requires a Cloud-Provider with LoadBalancer support
- ▶ TLS usually terminated at the LB
- ▶ Only works for domains, not paths

## EXPERT LEVEL: INGRESS CONTROLLER

- ▶ 99,9% of the time simply use ingress-nginx or envoy
- ▶ Domain Autodiscovery
- ▶ Certificates can be issued automatically
- ▶ High performance
- ▶ Works on URL paths

envoy
